### Left Ventricular Noncompaction A Genetic Cardiomyopathy Looking for Diagnostic Criteria

**J Am Coll Cardiol 2014;64:1991-3**

In the third paragraph of this Editorial Comment it reads:

“Although LV volumes increased and LVEF decreased in the 9.5 years elapsed between the 2 examinations studied, there were no differences across the quintiles of maximal NC/C ratio, and patients with greater trabeculations even showed a smaller change in their LV end-diastolic volume.”

But it should have read:

“LV volumes and LVEF decreased in the 9.5 years elapsed between the 2 examinations studied, but there were no relevant differences across the quintiles of maximal NC/C ratio, and patients with greater trabeculations even showed a smaller change in their LV end-diastolic volume.”

The authors apologize for this error.
